CABLES FOR PHOTOVOLTAICS

(SOLAR CABLES)

SOLAR POWER

Rapid urbanisation and globalisation has given rise to an increased demand for energy. The fast pace of depletion of conventional sources of energy have influenced us to find newer and sustainable solutions to meet this increase in demand. In such a scenario, renewable energy sources like wind and solar energy are the need of the hour.

Solar power generation has emerged as one of the most rapidly growing renewable sources of electricity. Solar energy is set to address the ever-growing need for power across the world. It has a low impact on the environment, serving as an ideal alternative to produce electricity, while maintaining a lower carbon-footprint and thereby helping preserve the nature. This has opened new avenues of business for the cable and wire manufacturing companies.

In the recent years, there has been an increase in the number of solar power generation plants, in India and across the world, which has in-turn created a higher demand for wires and cables. In response to this increase in demand, KEI is helping the renewable energy industry harness the opportunity.

KEI is proud to contribute to the renewable energy industry by supplying electrical solar cables to solar power plants. With a sharp focus on technology and innovation, the Company aims at becoming one of the key environment friendly technology companies of the country. To keep pace with the changing needs of the industry, it is important to overcome challenges, identify opportunities for growth and provide future-proof solutions for the industry.
